SUMMARY

Software Developer with 5+ years of experience delivering software solutions in manufacturing environments. Skilled in C#, Visual Basic, .NET Core, WPF, WinForms, SQL, and ERP systems. Experienced in independently delivering projects, developing business applications, and improving operational workflows through cross-functional collaboration and iterative development.

WORK EXPERIENCE

Software Developer

INNERGY | 01/2026 - 11/2026

- Independently developed a new project creation workflow in collaboration with product leads, reducing project creation time by approximately 70% while expanding functionality and improving UX.
- Developed and maintained Windows desktop applications using C#, Visual Basic, and WinForms, integrating SQL and legacy SQL Server Compact (.sdf) databases while applying OOP principles to build reusable components and maintainable solutions.
- Documented detailed bug investigations, findings, and technical recommendations for QA, improving testing efficiency and reducing follow-up communication.
- Leveraged AI-assisted development tools, including Claude, to streamline development workflows, automate repetitive tasks, and improve development efficiency.

Fishbowl ERP Administrator and Sales Coordinator

Rogue Truck Body LLC | 01/2024 - 01/2026

- Developed custom Fishbowl ERP reports and integrations using ODBC, SQL, and REST APIs to extend system functionality. Most notably, built a roll-up BOM cost report that automatically updated cost fields, providing accurate part-level cost visibility and supporting data-driven operational decisions.
- Served as the company's Fishbowl ERP subject matter expert, advising leadership on system configuration and implementation while managing fabricated parts, descriptions, and BOMs in collaboration with engineering and production teams.
- Redesigned and standardized order intake processes, reducing follow-up questions from 10–15 to 0–2 per week, saving thousands in labor while improving communication between sales and production.

WPF Application Developer

Rogue Truck Body LLC | 06/2022 - 01/2024

- Designed and developed six WPF applications in collaboration with cross-functional departments, building software solutions to automate workflows and streamline business operations.
- Utilized Microsoft Access and SQL Server to manage application data. Developed a reusable C# API to centralize SQL queries, improving efficiency and maintainability across the application suite.
- Implemented the Model-View-ViewModel (MVVM) design pattern across WPF applications, promoting separation of concerns and improving code maintainability and scalability.
- Designed and managed the company's Wix website, overseeing customer inquiries and coordinating form submissions with appropriate departments.

PLC and HMI Programmer

Quantum Innovations | 06/2021 - 06/2022

- Independently learned existing PLC and HMI programming environments and troubleshot issues across multiple machines, supporting in-house engineers and customers while minimizing downtime, often working with little to no existing codebase documentation.
- Redesigned a key machine interface to improve usability and consistency, refactored code for greater stability, and implemented features including variable belt speed control for precise lens curing.

EDUCATION

- **Bachelor's Degree** | Game Design | Southern New Hampshire University
- **Associate's Degree** | General Studies | Rogue Community College

---

PERSONAL PROJECTS

Voly - *Full Control Over the Windows Volume Mixer*

Tech Stack: C#, WPF, .NET Core, Github | *https://github.com/BattleFrog99/Voly-Releases*

- Developed a desktop application that provides enhanced control over the Windows Volume Mixer, allowing users to adjust the volume or mute status of any application, input device, or output device.
- Implemented customizable, system-wide hotkeys for immediate control which can be used when the app is minimized.
- Designed custom WPF controls that support real-time, fully customizable color schemes for personalized user theming.
